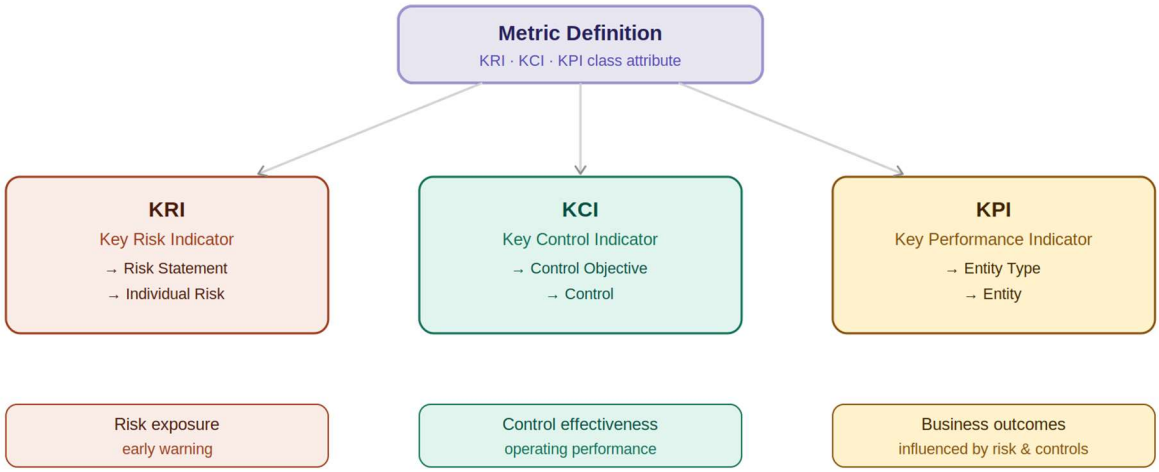
Auto-created Issues

Indicators

- Monitor risk or control
- Binary result: Pass / Fail
- Supports sample size
- Not replaced by metrics

Metrics

- Measure any GRC object
- Variable results: number, %, amount, ratio
- Supports aggregation
- Supports confidentiality



Metric Definition
KRI · KCI · KPI class attribute
KRI
Key Risk Indicator
→ Risk Statement
→ Individual Risk
KCI
Key Control Indicator
→ Control Objective
→ Control
KPI
Key Performance Indicator
→ Entity Type
→ Entity
Risk exposure
early warning
Control effectiveness
operating performance
Business outcomes
influenced by risk & controls

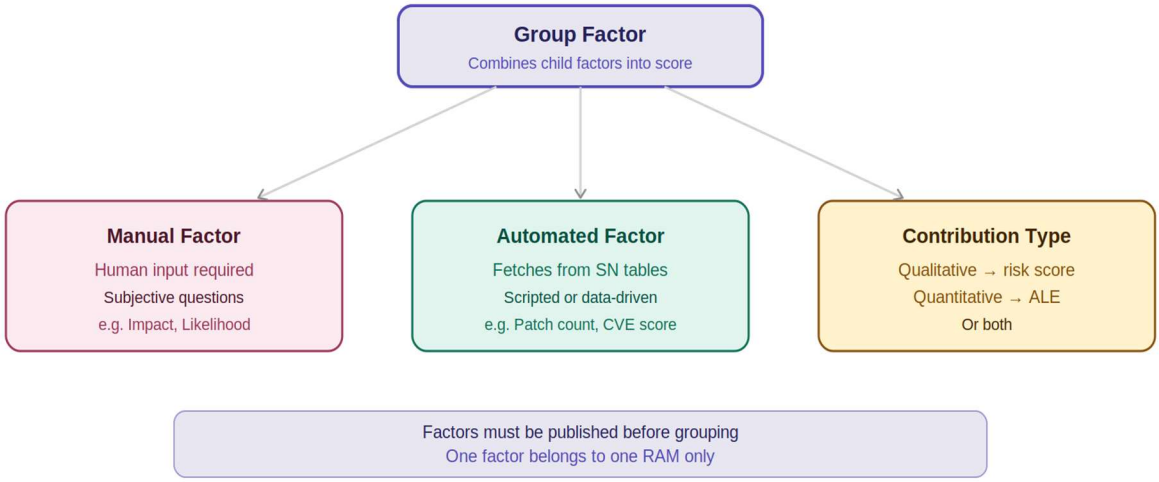
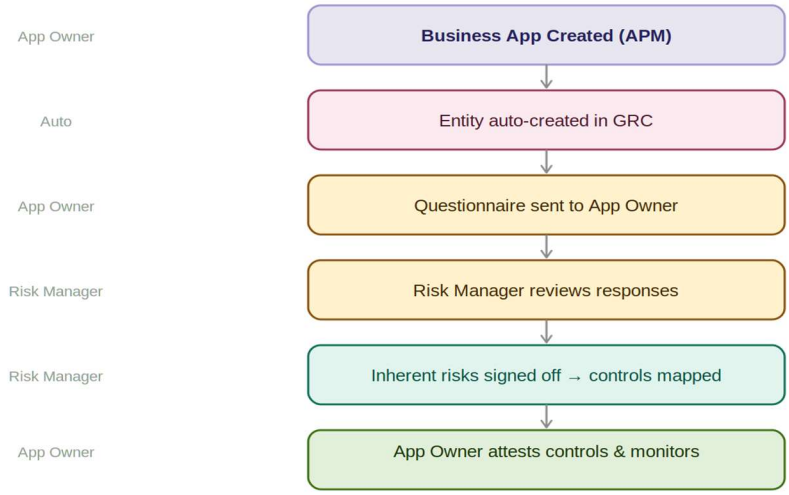
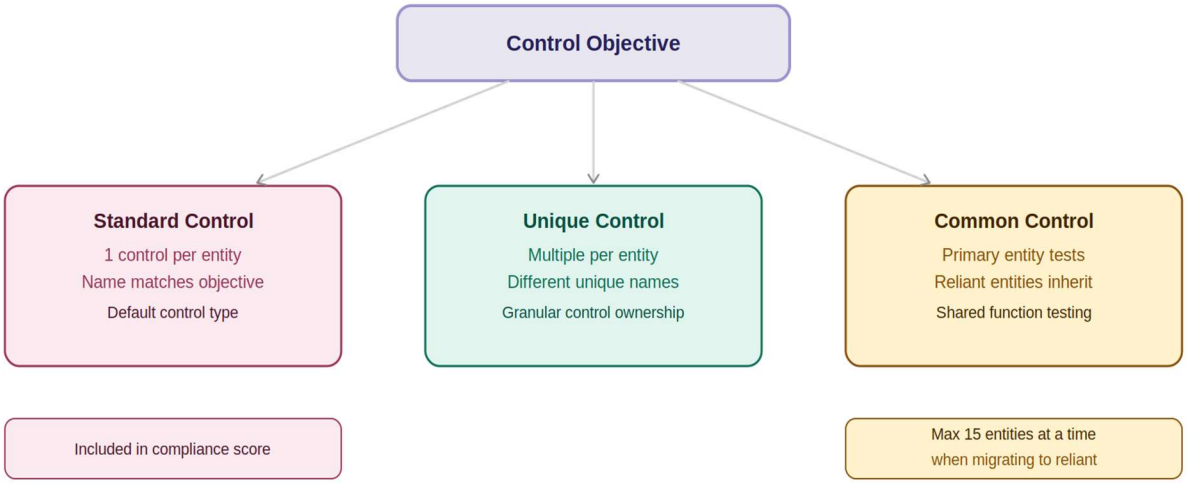
Awaiting Approval (optional — ara_approver role)



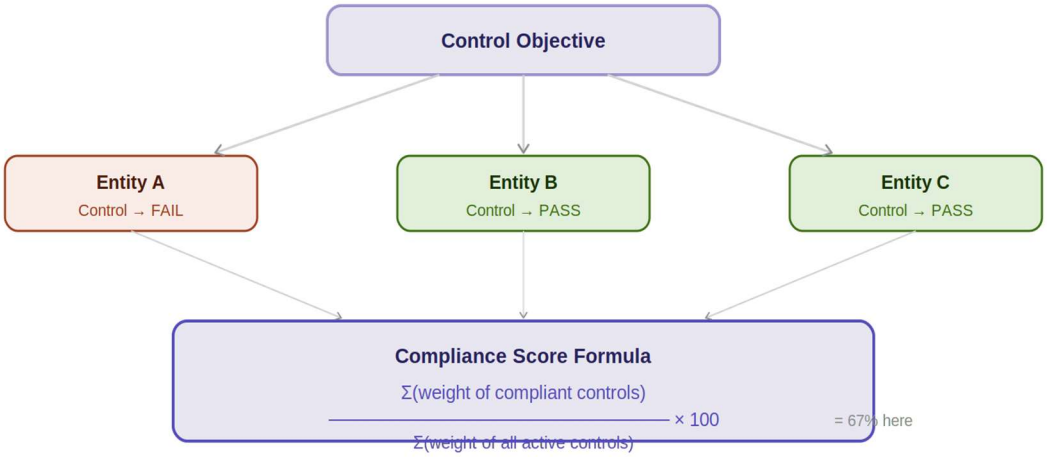
Factors must be published before grouping
One factor belongs to one RAM only



App Owner
Business App Created (APM)
Auto
Entity auto-created in GRC
App Owner
Questionnaire sent to App Owner
Risk Manager
Risk Manager reviews responses
Risk Manager
Inherent risks signed off → controls mapped
App Owner
App Owner attests controls & monitors



Control Objective
Standard Control
1 control per entity
Name matches objective
Default control type
Unique Control
Multiple per entity
Different unique names
Granular control ownership
Common Control
Primary entity tests
Reliant entities inherit
Shared function testing
Included in compliance score
Max 15 entities at a time
when migrating to reliant



Control Objective
Entity A
Control → FAIL
Entity B
Control → PASS
Entity C
Control → PASS
Compliance Score Formula
Σ(weight of compliant controls)
Σ(weight of all active controls)
× 100
= 67% here
